

Data intensive statistical modelling of infectious disease outbreaks

The department has a research group focusing on mathematical/stochastic modelling of, as well as statistical analyses of, infectious disease outbreaks. The group is led by prof Tom Britton who will be the main advisor, and currently the group consist of four more people: two PhD students, one post doc and one guest professor. See <https://www.su.se/english/research/research-groups/su-infdismod-group> for more information about the group. The group is financially supported by Vetenskapsrådet and KA Wallenberg Foundation.
